Systems design recognizes that the costs of building and operating a major facility such as an airport are comparable. Good planning and design will help make the physical configuration of a project facilities operations and the management procedures enable owners to avoid unnecessary capital costs.

AIRPORT SYSTEMS. PLANNING, DESIGN AND MANAGEMENT

Assess, measure and calculate the capacity of airport sub-systems and possess the skills to model passenger flows using design simulation software. Generate an outline airport design to a given specification, including runway configuration (and associated airside infrastructure), apron and terminal layouts and landside surface access systems.
