To use buttons and switches with your  
Arduino, you have to use a pull-up or pull-  
down resistor. `pinMode (pin, INPUT_PULLUP);`  
enables the internal pull-up resistors of the  
Arduino. `digitalWrite (pin, HIGH);` on an  
input pin has the same result. `digitalRead  
(pin)` returns the state of the input pin 1 =  
5v, 0 = 0v.

Arduino IDE is a special software running on your system that allows you to write sketches (synonym for program in Arduino language) for different Arduino boards. The Arduino programming language is based on a very simple hardware programming language called processing, which is similar to the C language. After the sketch is written in the Arduino IDE, it should be uploaded on the Arduino board for execution. The first step in programming the Arduino board is downloading and installing the ...
