Construction Technology for High
Rise Buildings: Handbook ...

High-rise structures begin at the lowest range with the rigid frame in both steel and concrete. Some or all of the joints between the beams and columns are rigidly joined together by welding the steel or pouring the concrete in situ, and lateral resistance is provided by the rigid joints; this system can rise about 90 metres (300 feet) with little premium.

Protection Screen - Self climbing
Protection screens enclose the
top floors of a high rise enabling
construction work to be carry out
in great safety, and protected
from the weather. The screen will
contain any debris and tools that
would otherwise fall to the
surface. The Protection screen
can be moved upwards
hydraulically or using a tower
crane.

deliver Get Living's project at Victory Plaza, East Village. The method combines digital technology with a new offsite manufacturing approach to construct buildings faster, safer and to a higher quality.

Mace unveils 'next generation' construction method
Construction technology is still a heavily fragmented, point-solutions-driven market with ample opportunity for integration plays that create either new platforms or attractive component acquisition targets for growing incumbent platforms. This fragmentation is more evident when analyzing construction tech offerings across the project life cycle.
