Mathematics. The basic operation used in digital compositing is known as 'alpha blending', where an opacity value, ' $\alpha$ ', is used to control the proportions of two input pixel values that end up a single output pixel. As a simple example, suppose two images of the same size are available and they are to be composited.

## **Digital compositing - Wikipedia**

Now that we have looked at how to create professional digital images using the powerful features in both of the digital image compositing software packages and to export them to the most popular file formats, it's time to take a look at those programming platforms themselves, just in case you want to take your digital image compositing career to the next level.
