Documentation for HERE's Routing API. Use the calculateroute resource to return a route between two waypoints. The required parameters for this resource are app_id and app_code, two or more waypoints (waypoint0 and waypoint1, to waypointN) and mode (specifying how to calculate the route, and for what mode of transport). For some modes departure or arrival (if applicable) is required.

CostFactor is also the preferred metric for comparing multiple routes such as for doing trip planning (traveling salesman problem) based on the response of a matrix route calculation. If time and distance is required for only a subset of a matrix route response, it is recommended to query for distance and time separately, instead of requesting these values directly for a matrix request.
