society, focusing on environmental concerns of coastal regions.

Introduction to Environmental Biology | UNB

Environmental temperature can affect growth and survival of; prokaryotes as they lack mechanisms of insulation or internal regulation of temperature. Too hot and prokaryotes die because of coagulation and denaturation of; proteins, degradation of nucleic acids, and disruption and melting of cell membranes. Too cold, they survive but cannot grow.

Introduction to Biology | Basic Biology

An Introduction to Ecology

Ecology is the study of the interactions of living organisms with their environment. Within the discipline of ecology, researchers work at four specific levels, sometimes discretely and sometimes with overlap. These levels are organism, population, community, and ecosystem.
