Calculation Of Duct

Pressure Drop
volume $10\text{m}^3/\text{min}$ is ventilating in the duct of length 3m However, we assume that there is a 90° bend in the middle one time. From the special graph, the pressure loss of the straight tube is approximately $12\text{Pa}/\text{m}$. equivalent straight tubular length of 90° bend is 900mm Pressure loss = $12 \times (3 + 0.9) = 46.8(\text{Pa})$

Calculation Of Duct

air duct diameters and pressure loss shall be determined under condition of permissible air speed in the duct. Section 1: air flow is $200 \text{ m}^3/\text{h}$. Suppose that the air duct diameter is 200 mm and air speed is 1.95 m/s , then the pressure loss is $0.21 \text{ Pa/m} \times 15 \text{ m} = 3 \text{ Pa}$ (refer to the pressure loss diagram for the air ducts).
