Modeling and simulation (M&S) are attractive and widely used techniques for the study of the performance of computer networks. They provide detailed results without disturbing network operation or even without the need of network availability. This chapter summarizes the whole topic of performance M&S applied to

A simulation, simply, is the execution of a model. This requires the further definition of the initial conditions of the system under consideration, and specified values of parameters. Again, this implies expertise on the system at hand. In the coffee-shop-system, one has to decide a few things.

~~Computer simulation~~ — Wikipedia

Computer simulation is often used as an adjunct to, or substitution for, modeling systems for which simple closed form analytic solutions are not possible. There are many different types of computer simulation, the common feature they all share is the attempt to generate a sample of representative scenarios for a model in which a complete enumeration of all possible states would be prohibitive ...
