Working Guide to Pump and ...

The micro heat pump only draws between 400W (watts) and 800W of electricity, and produces around 1,200W to 2,400W of heat (depending on the compressor and fan size and the air intake temperature), so if you have photovoltaic panels

Online Library Working Guide

(PV) fitted to the property, the micro heat pump will also be optimised to use the on-house generation and possibly heat your water for free for much of the year.

Pump - Wikipedia

How does an air source heat pump work? An air source heat pump is usually placed outdoors at the side or back of a property. It takes heat from the air and boosts it to a higher temperature using a heat pump. The pump needs electricity to

Online Library Working Guide

run, but it should use less electrical energy than the heat it produces.
